Version 11012025

To move the Bitcoin.Wallet.ms to a new URL or a new host, follow these steps:

1. Select your new URL or use the same one.
2. Select a hosting provider like MochaHost.com .
3. Point the domain name (Bitcoin-Wallet.live) or similar to their name servers.
4. Upload all the files to their servers into the correct folder.
5. Change the files in these folders to reflect the change;
   "RW.JS" line 11:
6. Create a database using cPanel and add a user to that DB, then import the .sql file (merchan1_info.sql) then add some test gift cards, there are images in the DB folder. "bwapi/app/config.php" change the database settings. (There is a folder called Place_in_Root, and the bwapi folder is inside and a ReadMe.txt file too).
7. You will need an xpub key for the giftcard transaction to receive. Use either Electrum.org or IanColeman Bip39 to generate the xpub key.
8. Copy the xpub key and paste in the database created above in the table called "bwapiusers" and complete the rest of the table fields (copy from other version)
9. You may want to adjust the fee in this same table, this is the fee we collect on the conversion in the wallet to a giftcard.
10. Add an email account for the new domain (example: bitcoin@bitcoin-wallet.live)
11. Edit the mail.php file to reflect the new domain name
12. You may want to test the mail(.php) function to confirm it works, edit the file "testmail.php" upload it to the same directory, then go to that file from your browser and if you get the positive message and the email arrives… all good!
13. You may want to edit the logo.png file in the IMG folder so it matches the new domain.
14. Be sure that you use an HTML editor that supports UTF-8 (Notepad++ does).

Test each of these sending options:

- Make a new wallet (laptop and mobile) [ ]
- Sweep private key from other wallet (a 5 and an Electrum) [ ]
- Scan QR Code with amount and address (best on a mobile device) [ ]
- Paste wallet address [ ]
- Send to an email address [ ]
- Send to NFC tag (needs a mobile device) enter NFC18 in the top field [ ]
- Send to a Freename.io address with and without special characters, example; Howard.MyBitcoin and hg-₿🪙🚀.₿wallet [ ]
- Buy a giftcard, example; in to top field VISA10 *confirm the merch address too* [ ]
- Send MAX amount, type MAX in the top field [ ]
